# JAPANESE STEEL BEARD TRIMMER

## STEP BY STEP

1. Use on clean, dry hair.
2. If possible, when using for the first time, try and grow your facial hair for at least 3 days before cutting. This will give you a better result, as your facial hair will feel thicker.
3. Set the cutting length as required.
4. Start cutting with a longer length first, then trim again if the length is longer than desired.
5. Hold the trimmer against the hair. Where possible try to hold the trimmer at 90° to the face for best results.
6. Move the trimmer upwards through the hair, a little at a time, against the direction of hair growth.
7. The beard trimmer will work most effectively when cutting through the hair at its own speed - never force through the hair. You may experience a little resistance when trimming the moustache area, where hair is thicker and grows in many different directions.
